

CROWS CORROSION CONTROL COVER (C4)

Protect valuable cargo with the CROWS Corrosion Control Cover (C4). Manufactured from Intercept Technology™ materials using state of the art reusable corrosion protection, the C4 provides active unparalleled protection for enclosed items.

Rail Shipments China to Australia

Intercept Australia with, Tufwrap Australia and Intercept China, successfully provided corrosion protection for rail wagons being shipped from China to Australia. The project commenced with trial demonstrations in Australia through to shipping trials from China to Australia. The process allowed for the rail cars to be shipped oil and wax free providing a cost saving not having to apply and re-remove oil at the senders and receivers end. Being a 100% recyclable film enables it to be on sold providing a cash-back saving.

Iron ore Grizzly Feeders

Grizzly Feeders feed primary jaw crushers, selecting the large size dirt which requires primary crushing. The Grizzly Feeder consists of a very large vibrating body made of thick plate, with inside lining of anti-abrasive wear sections of mild steel and manganese steel that is extremely susceptible to corrosion. Intercept Shrink-film provided the solution for long term preservation.

Gained Specification

Intercept Technology™ is pleased to announce it has gained specification for NOV's Oil and Gas long term Delayed and On-Hold preservation; it gives guidelines for selecting packing material according to the stages of progress and outlines specific instructions for use of Intercept packing of all types of equipment/parts for transport and storage.

Intercept Australia provided corrosion protection for the MK45 Gun and Load assembly 5"/54 MK 45 Light Weight Gun Mount (LWGM) which is the Navy's primary anti-surface gun battery and Naval Gun Fire Support (NGFS) weapon. Intercept meets DEF(AUST)1000C Part 3 for preservation packaging.

1000 + Parts Inspected

1000+ Parts Inspected at an Asian distribution outlet for power generation and turbine parts that are possibly kept for up to two+ years in Corrosion and Static Intercept®. Inspections and audits are able to be carried out with the items being re-packed in the same Intercept reusable packaging. Corrosion Intercept has a built in saturation indicator, can be opened multiple times allowing for inspections. When the bag is closed it goes back to work. Only Intercept Technology™ is able to provide this reusability.

Intercept Philippines long-term preservation for Geothermal power plant turbines

The project consisted of providing Intercept product and an on-site application team that worked closely with the plant engineers. Turbines were wrapped in Intercept shrink-film with a second layer of Power-Shrink. Clear windows enabled weekly inspections and reporting. Worldwide the Philippines rank second to the United States in producing geothermic energy.

Geothermal energy is the heat from the Earth. It's clean and sustainable. Resources of geothermal energy range from the shallow ground to hot water and hot rock found a few miles beneath the Earth's surface, and down even deeper to the extremely high temperatures of molten rock called magma. In the Philippines geo-thermal energy already provides 27% of the country's total electricity production and is growing.

INTERCEPT Secondary Preservation Barrier Protection

When inert gases systems such as Nitrogen leak you lose the protection !
Static Intercept® does not off-gas or react with inert gasses. The Static Intercept® bag can be opened for inspection allowing for rotation of shafts and bearings. When re-closed Intercept goes back to work. 'It's an affordable fail-safe system !'

INTERCEPT Long Term

One of Western Australia's most important pieces of energy infrastructure has relied on Intercept Technology™ to preserve its turbines at a semi-open Australian storage facility for 7+ Years later... The result speaks for its self ! !

INTERCEPT Technology™ Reusable Covers

Customised covers manufactured for the storage and distribution of turbine engines utilising Intercept Technology™ solving problems other packaging films can't. Intercept doesn't flood the storage space with volatile chemicals, or require vacuum packaging for preservation. Intercept's covalently bonded copper in a PE resin to sacrificially eliminate the corrosive gases that can pass through other polyethylene films or are trapped during initial packaging. This cleansing protection continues even when temporarily opened by Customs or users.

Thailand's leading state-owned power utility, under the Ministry of Energy, is responsible for electric power generation and transmission for the whole country. They're the largest power producer in Thailand, owning and operating power plants of different types and sizes, located in 45 sites across the country. Intercept Thailand were called to provide corrosion protection for the turbine from the workshop to the power station ensuring no corrosion occurred during transport and storage.

... simply better protection!

Oil and Gas Cost Saving

Protection Of Running Tools On And Off The Rig

Intercept Australia, with its Singaporean affiliate FPM Technology, have been working with oil and gas providers in Australia and Singapore to look at new ways to create cost savings. One proven concept enables the corrosion protection of 'running tools' during storage and shipment to and from the rigs and platforms. The system requires no corrosion preventative solvents or oils that maybe spilled during loading and off-loading. Intercept also enables reductions in the remanufacturing of 'running tools' not used, providing substantial cost savings. Intercept films are recyclable, contains no solvents or oils, is compactable and recyclable as a non- hazardous film.

ANTI-CORROSION PACKAGING FOR: STORAGE LOGISTICS PRESERVATION

100% Reliability
Corrosion Prevention for all Applications.

Efficient
Intercept Technology saves Time and Money.

Oil-free
No more need to oil. Ready for action.

Environmental
Saves material and protects the environment.
