

Intercept Defence Packaging

Oil and Solvent Free

- Reusable
- Anti-Corrosion
- Anti-Static
- Air freight safe as Non off-gassing

America & Canada MIL-PRF-81705D

British DEF STAN 81-41

Australia & New Zealand DEF(AUST)1000C

Intercept complies to:

- MIL-PRF-81705D & MIL-PRF- 131K
- Rolls Royce RPS 367
- Boeing approved
- Raytheon approved

Intercept Australia with SKF Australia leading the way in large bearing preservation

SKF services a variety of industries in Australia such as Mining, Oil and Gas, Defence, Food and Beverage, Pulp and Paper, Steel, Rail, Automotive, Renewable Energy and Agriculture.

The SKF Australian Solution Factory (Perth) has been working closely with Intercept Australia to develop Short and Long Term anti-corrosion preservation methods.

Over a 24 month period Intercept Australia worked with SKF to develop three types of preservation packaging solutions, Short Term, Long Term and Tropical. Advantages were a reduction in packaging process steps from 11 down to 7 and also the reduction of products used from 4 down to 1.

Intercept Australia is helping SKF to improve efficiency and reduction in CO₂ emissions as part of SKF's global foot print. **Simply Better Protection ...**

Intercept Vietnam hydroelectric power plant closure and relocation

Intercept Vietnam (SancoPack) recently provided Anti-Corrosion packaging preservation to the Xekaman hydroelectric plant in Laos after its 250 MW dam and tunnel closure. Spare parts from the power plant required 3 year preservation to enable the road, sea transport and storage from Laos to China and India (50+ items). Intercept currently provides long-term turbine anti-corrosion in Australia, Philippines, Thailand, America and Europe.

Get more from your returnable/reusable packaging

Intercept Australia can design your returnable Anti-Corrosion packaging to be durable and protect your product in most industrial environments. Intercept Packaging enables inspection during transport and customs, and provides access to ID plates and rotation of shafts and bearings ...Simply close the packaging and Intercept goes back to work.

Following on from past VW environmental and innovation awards, Intercept Australia and Intercept Australasia continue to work with our distributors and customers to reduce unproductive, costly energy processes by switching to reusable Intercept packaging. VW was able to eliminate 4,080 litres of oil and 24,871 litres of volatile substances, eliminating 9 working steps from its process, reducing carbon emissions by 15,000 tons p.a.

Large Resource companies and their suppliers continue to work with Intercept Australia to reduce oil and volatile substances from their packaging, while making a safer and more worker-friendly environment.

Inspection made easy with clear windows and zippers

Intercept packaging allows access to the equipment for inspection and rotation of shafts and bearings without losing the Anti-Corrosion preservation as per the specification requirements. In most instances the rotation requirement is 1-3 months, no need to replace the packaging, close or zip it up and Intercept goes back to work saving you money.

Intercept Australia works with our clients to achieve the required specification requirements for the anti-corrosion packaging and backs this up with customised Standard Operational Procedures (SOP's) guidelines.

Strengthening Veteran Families

... simply better protection!

What is The Younger Heroes?

The Younger Heroes is a four day physical and psychological training camp designed to reconnect veterans and those that have served the nation and their children, and build resilience in those relationships through shared effort and open communication.

ANTI-CORROSION PACKAGING
FOR: STORAGE LOGISTICS PRESERVATION

100% Reliability
Corrosion Prevention for all Applications.

Efficient
Intercept Technology saves Time and Money.

Oil-free
No more need to oil. Ready for action.

Environmental
Saves material and protects the environment.
